

This is Nasser who usually is rubbed bald and used to have no mane, but on his minerals balanced to forage, the blue green algae, spirulina, and extra vitamin E he looks like a different horse and has an impressive mop! The stud we got him from can't believe how much mane he has grown, as with them he never had any. In fact, we were given him because of severe seasonal itching problems! His healthy skin is maintained, to be free of complaints such as sweet itch, by feeding optimum forage focussed nutrients. Amanda Jones - North Wales
